

carrier and/or private carrier basis. In addition, this category includes Direct Broadcast Satellite (DBS) Service which includes space stations authorized under part 100 of the Commission's rules to transmit or re-transmit signals for direct reception by the general public encompassing both individual and community reception. For FY 1998, entities authorized to operate geostationary space stations (including DBS satellites) will be assessed an annual regulatory fee of \$97,975 per operational station in orbit. Payment is required for any geostationary satellite that has been launched and tested and is authorized to provide service.

c. Space Stations (Non-Geostationary)

37. Non-geostationary Orbit (NGSO) Systems (such as Low Earth Orbit Satellite Systems) are space stations that orbit the earth in non-geostationary orbit. They are authorized under part 25 of the Commission's rules to provide communications between satellites and earth stations on a common carrier and/or private carrier basis. For FY 1998, entities authorized to operate NGSOs will be assessed an annual regulatory fee of \$164,800 per operational system in orbit. Payment is required for any NGSO System that has one or more satellites operational. In our FY 1997 Report and Order at ¶ 75 we retained our requirement that licensees of LEOs pay the LEO regulatory fee upon certification of operation of a single satellite pursuant to section 25.120(d) – subsequently renumbered as section 25.121(d). We require payment of this fee following commencement of operations of a system's first satellite to insure that we recover our regulatory costs related to LEO systems from licensees of these systems as early as possible so that other regulatees are not burdened with these costs any longer than necessary. Because section 25.121(d) has significant implications beyond regulatory fees (such as whether the entire planned cluster is operational in conditions of the license) we are clarifying our current definition of an operational LEO satellite to prevent misinterpretation of our intent as follows:

Licensees of non-geostationary satellite systems (such as LEOs) are assessed a regulatory fee upon the commencement of operation of a system's first satellite as reported annually pursuant to sections 25.142(c), 25.143(e), 25.145(g), or upon certification of operation of a single satellite pursuant to section 25.120(d).

d. International Bearer Circuits

38 Regulatory fees for International Bearer Circuits are to be paid by facilities-based common carriers (either domestic or international) activating the circuit in any transmission facility for the provision of service to an end user or resale carrier. Payment of the fee for bearer circuits by non-common carrier submarine cable operators is required for circuits sold on an indefeasible right of use (IRU) basis or leased to any customer, including themselves or their affiliates, other than an international common carrier authorized by the Commission to provide U.S. international common carrier services. Compare FY 1994 Report and Order at 5367. Payment of the international bearer circuit fee is also required by non-common carrier satellite operators for circuits sold or leased to any customer, including themselves or their affiliates, other than an international common carrier authorized by the Commission to provide U.S. international common carrier services. The fee is based upon active 64 Kbps circuits, or equivalent circuits. Under this formulation, 64 Kbps circuits or their equivalent will be assessed a fee. Equivalent circuits include the 64 Kbps circuit equivalent of larger bit stream circuits. For example, the 64 Kbps circuit equivalent of a 2.048 Mbps circuit is

30 64 Kbps circuits. Analog circuits such as 3 and 4 KHz circuits used for international service are also included as 64 Kbps circuits. However, circuits derived from 64 Kbps circuits by the use of digital circuit multiplication systems are not equivalent 64 Kbps circuits. Such circuits are not subject to fees. Only the 64 Kbps circuit from which they have been derived will be subject to payment of a fee. For FY 1998, the regulatory fee is \$6.00 for each active 64 Kbps circuit or equivalent. For analog television channels we will assess fees as follows:

Analog Television Channel Size in MHz	No. of equivalent 64 Kbps Circuits
36.....	630
24.....	288
18.....	240

e. International Public Fixed

39. This fee category includes common carriers authorized under part 23 of the Commission's Rules to provide radio communications between the United States and a foreign point via microwave or HF troposcatter systems, other than satellites and satellite earth stations, but not including service between the United States and Mexico and the United States and Canada using frequencies above 72 MHz. For FY 1998, International Public Fixed Radio Service licensees will pay a \$375 annual regulatory fee per call sign.

f. International (HF) Broadcast

40. This category covers International Broadcast Stations licensed under part 73 of the Commission's Rules to operate on frequencies in the 5,950 KHz to 26,100 KHz range to provide service to the general public in foreign countries. For FY 1998, International HF Broadcast Stations will pay an annual regulatory fee of \$475 per station license.

DESCRIPTION OF FCC ACTIVITIES

I. Activities That Are Not Included In Regulatory Fees

1. **Authorization of Service:** The authorization or licensing of radio stations, telecommunications equipment, and radio operators, as well as the authorization of common carrier and other services and facilities. Includes policy direction, program development, legal services, and executive direction, as well as support services associated with authorization activities. Although Authorization of Service is described in this attachment, it is not one of the activities included as a feeable activity for regulatory fee purposes pursuant to Section 9(a)(1) of the Act. 47 U.S.C. § 159(a)(1).

II. Activities That Are Included In Regulatory Fees

2. **Policy and Rulemaking:** Formal inquiries, rulemaking proceedings to establish or amend the Commission's rules and regulations, action on petitions for rulemaking, and requests for rule interpretations or waivers; economic studies and analyses; spectrum planning, modeling, propagation-interference analyses, and allocation; and development of equipment standards. Includes policy direction, program development, legal services, and executive direction, as well as support services associated with policy and rulemaking activities.

3. **Enforcement:** Enforcement of the Commission's rules, regulations and authorizations, including investigations, inspections, compliance monitoring, and sanctions of all types. Also includes the receipt and disposition of formal and informal complaints regarding common carrier rates and services, the review and acceptance/rejection of carrier tariffs, and the review, prescription and audit of carrier accounting practices. Includes policy direction, program development, legal services, and executive direction, as well as support services associated with enforcement activities.

4. **Public Information Services:** The publication and dissemination of Commission decisions and actions, and related activities; public reference and library services; the duplication and dissemination of Commission records and databases; the receipt and disposition of public inquiries; consumer, small business, and public assistance; and public affairs and media relations. Includes policy direction, program development, legal services, and executive direction, as well as support services associated with public information activities.

**Factors, measurements and calculations that go into determining
station signal contours and associated population coverages**

AM Stations

Specific information on each day tower, including field ratio, phasing, spacing and orientation was retrieved, as well as the theoretical pattern RMS figure (mV/m @ 1 km) for the antenna system. The standard, or modified standard if pertinent, horizontal plane radiation pattern was calculated using techniques and methods specified in sections 73.150 and 73.152 of the Commission's rules. See 47 U.S.C. §§ 73.150 and 73.152. Radiation values were calculated for each of 72 radials around the transmitter site (every 5 degrees of azimuth). Next, estimated soil conductivity data was retrieved from a database representing the information in FCC Figure M3. Using the calculated horizontal radiation values, and the retrieved soil conductivity data, the distance to the city grade (5 mV/m) contour was predicted for each of the 72 radials. The resulting distance to city grade contours were used to form a geographical polygon. Population counting was accomplished by determining which 1990 block centroids were contained in the polygon. The sum of the population figures for all enclosed blocks represents the total population for the predicted city grade coverage area.

FM Stations

The maximum of the horizontal and vertical HAAT (m) and ERP (kW) was used. Where the antenna HAMSL was available, it was used in lieu of the overall HAAT figure to calculate specific HAAT figures for each of 72 radials under study. Any available directional pattern information was applied as well, to produce a radial-specific ERP figure. The HAAT and ERP figures were used in conjunction with the propagation curves specified in section 73.313 of the Commission's rules to predict the distance to the city grade (70 dBuV/m or 3.17 mV/m) contour for each of the 72 radials. See 47 U.S.C. § 73.313. The resulting distance to city grade contours were used to form a geographical polygon. Population counting was accomplished by determining which 1990 block centroids were contained in the polygon. The sum of the population figures for all enclosed blocks represents the total population for the predicted city grade coverage area.
